PROFESSIONAL SUMMARY

Full-stack engineer building backend systems, cloud infrastructure, mobile products, and applied AI. Leads application development at Galen Africa and created Orvel, a local-first platform for teaching and evaluating AI agents. Experienced in taking products from architecture and data modeling through implementation, testing, deployment, and operational reliability.

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, SQL, HTML, CSS
Backend	Node.js, Express, FastAPI, Django, REST APIs, authentication, queues, webhooks
Frontend & Mobile	React, Next.js, React Native, Expo, Electron
Data & Infrastructure	PostgreSQL, MySQL, SQLite, Redis, Docker, GitHub Actions, Google Cloud, Linux
AI Engineering	Agent runtimes, provider integrations, contextual retrieval, evaluations, Ollama, Groq, OpenAI

EXPERIENCE

Orvel | Creator & Lead Engineer

2026 - Present

Remote

- Designed a local-first AI-agent platform with clear boundaries for runtime, knowledge, memory, skills, teaching, and evaluations.
- Built Orvel Studio workflows for agent creation, provider configuration, conversations, contextual corrections, knowledge, and repeatable evals.
- Integrated local and hosted inference through Ollama, Groq, and OpenAI while keeping provider credentials server-side.

Prismor | Contributing Engineer

2026 - Present

Remote

- Improved upstream authentication failure handling across buffered and streaming AI responses.
- Added automated coverage for proxy error paths and documented safer local OpenAI-compatible backend configuration.

Galen Africa | App Developer / Team Lead

2025 - Present

Nigeria

- Lead architecture, product direction, and delivery for GalenDesk, an offline-first pharmacy inventory and point-of-sale application.
- Designed transactional database workflows for FEFO stock deduction, batch tracking, expiry monitoring, and reliable offline operations.
- Coordinate mobile, desktop, backend integration, and release decisions from implementation through delivery.

Afrigenomed | Backend Developer

2024 - 2026

Remote

- Built Node.js backend logic supporting users, content, and learning workflows for a digital-health learning platform.
- Developed REST APIs and dependable application data flows while translating product requirements into maintainable backend behavior.

SELECTED ENGINEERING WORK

RunXR

Self-hosted CI/CD platform with GitHub OAuth, signed webhooks, persistent build jobs, live logs, and isolated Docker-first runners.
TypeScript | Webhooks | Docker | CI/CD

Evnar

Self-hosted secrets manager with AES-256-GCM encrypted storage, environment-scoped configuration, and a CLI-first workflow.
TypeScript | Cryptography | CLI | Security

Scalable API Platform

Production-oriented API with authentication, async data access, caching, background jobs, migrations, containers, and continuous integration.
Python | FastAPI | PostgreSQL | Redis | Docker

Webhook Billing & Notifications

Backend workflow with HMAC verification, idempotent event processing, subscription-state synchronization, and queued notifications.
Backend Engineering | Webhooks | Queues | Reliability

StackPrint

Privacy-first stack-trace formatter that runs entirely in the browser, keeping debugging data on the user's device.
JavaScript | Browser APIs | Developer Tooling

EDUCATION

University of Ilorin

Expected 2029

B.Eng. Materials and Metallurgical Engineering

Combines formal engineering study with self-directed software engineering, product development, and production systems work.

ADDITIONAL

Based in Ilorin, Nigeria. Available for backend, cloud, AI infrastructure, developer tooling, and product engineering opportunities.
